

Product Name :
Lever Balance**Product Code :**
ALTECEDULABB0786**Description :****Lever Balance**

This balance has been designed to plug the long felt need for an inexpensive, portable and robust single pan balance of modest size, capable of giving consistent and prompt readings to a fair degree of accuracy. The scale, calibrated in dual range, is in the form of a quadrant, with the changeover in ranges being achieved conveniently using the hinged weight arm provided. The index pointer is of edge reading type, specially designed to avoid parallax errors, which permits the viewing of scale from any convenient position. Leveling screw provided for zero adjustment. Once zero is set in any range, no leveling is needed for zero adjustment while changing range since zeros of both the ranges correspond to each other. The detachable top pan is made of CPSS with a hook at its bottom for specific gravity work and suspended weights.
