

Product Name :
Rotary Microtome (Erma Type)**Product Code :**
ALTECEDULABC0936**Description :****Rotary Microtome (Erma Type)**

This microtome is a highly versatile sectioning device suitable for Medical Institutions, Research & Pathological Laboratories. This microtome has special application for cutting thin sections of histopathological specimens and also caters to the demands of industries such as Plastic, Leather, Textiles, Rubber & Fertilizer. The Microtome is driven by a handle which can also be locked. Cutting sections are obtained in different thickness by mechanically operated crank through a knurled knob in front of the instrument. The knurled knob is graduated in microns for feed setting and ready reference. A detent click action ensures positive adjustments in one micron increment. All parts are fabricated from selected alloys and the Microtome knife is manufactured from the fine grain steel tested to maintain optimum sharpness strength.
