

Product Name :

Sliding Microtome

Product Code :

ALTECEDULABC0937

**Description :****Sliding Microtome**

Sliding Microtome is a standard sectioning instrument especially designed for Research Laboratories for cutting sections of paraffin as well as celloiden embedded specimens. Its knife holder rigidly supports a 120mm knife made from imported fine grain hard tool steel, which ensures accurate sectioning not only for soft tissues but also harder materials such as stem, root and other objects. Sliding Microtome is recommended for the labs where sections of fairly large specimen are required.
